Children are suffering from a hidden epidemic of child abuse and neglect. Every year more than 3 million reports of child abuse are made in the United States involving more than 6 million children. The United States has one of the worst records among industrialized nations - losing on average between four and seven children every day to child abuse and neglect. It is understood that every state has different statutes regarding these topics; however, the objectives of recognizing, reporting, and investigating cases of this nature are the same. Just as every crime scene is different, every case involving a child is different. Best practices and standard procedures exist to help ensure cases are discovered, reported and investigated properly, to ensure good documentation is obtained to achieve prosecution and conviction. A REVIEW GUIDE FOR O'HARA'S FUNDAMENTALS OF CRIMINAL INVESTIGATION

The sudden or unexplained death of an individual has a profound impact on families and friends of the deceased and places significant responsibility on the agencies tasked with determining the cause of death. Increasingly, science and technology play a key role in death investigations. One of the hallmarks of science is adherence to clear and well-grounded protocols. In many jurisdictions, responsibility for conducting death investigations may rest with pathologists, medical examiners, or coroners, in addition to their other duties. There is little training available in the best procedures for handling these crucial and sensitive tasks. To help fill the gap, the National Institute of Justice, joined by the Centers for Disease Control and Prevention and the Bureau of Justice Assistance, supported the development of the guidelines presented in this report. These guidelines were produced with the vigorous participation of highly experienced officials and professionals who served on the National Medicolegal Review Panel. A technical working group of 144 professionals from across the country provided the grassroots input to the panel's work. Jurisdictions will want to carefully consider these guidelines and their applicability to local agencies and circumstances. By adhering to agreed-upon national standards, death investigators can arrive at the truth about a suspicious death. Families and friends can be consoled by knowing what happened to their loved one, and justice can be administered on the foundation of truth that must always guide our work. The principal purpose of the study was to identify, delineate, and assemble a set of investigative tasks that should and could be performed at every death scene. These tasks would serve as the foundation of the guide for death scene investigators.

A Guide to Forensic Geology

The auditing profession has evolved significantly from its earliest roots of protecting the pharaoh's riches. The catastrophic business failures have caused some to rethink the value of the audit. Due to lack of alternatives, the marketplace has demanded that auditors take responsibility for fraud detection and this demand has been buoyed by the Sarbanes-Oxley Act, the new PCAOB Risk Based Auditing and new Internal Controls standards, all requiring increased performance on the part of the auditor to find material financial statement fraud. The book explores exactly what assurance auditors should be expected to provide and suggests alternatives to providing the capital markets more of what they are requiring—greater assurances that the financial statements they rely upon for investment decisions are free of material error, including fraud. The book shows how audit firms need to retool to provide access to a new breed of auditor—the forensic specialist.
